

Program 6: Study and analysis of sharing and exporting the UI/UX design

Problem statement: Sharing and Exporting Prototypes in Figma for Collaborative Feedback

Objectives

- Understand how to export design assets from Figma in various formats.
- Learn to share interactive prototypes with teams and clients.
- Explore permissions, commenting, and handoff features for developers.

Topics Learnt

- Exporting design files (PNG, JPG, SVG, PDF)
- Sharing prototypes using public/private links
- Inviting collaborators with view/edit permissions
- Developer handoff using Inspect panel
- Commenting and feedback tools in Figma

Steps

1. Prepare the Design File

Ensure the file is organized with properly named layers and components.

2. Export Design Assets

- Select UI elements or frames.
- Use the "Export" section in the right panel.
- Choose format (PNG, SVG, etc.) and resolution (1x, 2x).

3. Share the Prototype

- Click the Share button.
- Adjust link access: Anyone with the link (View only/Edit access).
- Use "Present" mode for sharing live prototypes.

4. Developer Handoff

- Enable the Inspect tab for developers to view specs, CSS, and downloadable assets.

5. Comment and Collaborate

- Enable commenting mode.
- Add comments on specific design elements.
- Tag team members for feedback.

Expected Output

A shareable, interactive prototype link with:

- Export-ready UI assets
- Defined user permissions
- Developer-accessible specs and measurements
- Clear stakeholder feedback using comments

Program 7: Study about custom control and operational control their working and tools used.

Problem statement:

Design and simulate a custom volume slider and toggle switch, and demonstrate the use of operational controls in layout management.

Objectives

- Learn about custom-built UI controls like sliders, toggles, or calendars.
- Understand operational controls like undo, zoom, history, and alignments in tools like Figma.
- Explore plugins that enhance UI design productivity.

Topics Learnt

- Creating reusable custom components
- Functional and interactive UI elements
- Figma’s operational tools (align, distribute, auto-layout)
- Plugins like Content Reel, Iconify, Stark, etc.

Steps:

1. **Create Custom Controls:**
 - Use rectangles and circles to build a toggle or slider.
 - Convert to Component and use Variants for ON/OFF states.
2. **Prototype Interactions:**
 - Link each variant using “On Click” → “Change to”.
3. **Use Auto Layout:**
 - Select parent frame → Apply auto-layout for responsive design.
4. **Apply Alignment Tools:**
 - Use align/distribute options on the top bar.
5. **Explore Plugins:**
 - Try “Content Reel” or “Iconify” for enriching custom controls.

Expected Output

A Figma file demonstrating:

- Custom interactive control with states
- Effective use of auto-layout and alignment tools.

Program 8: Implementation of Information Search Module Using UI/UX

Problem statement: Designing a Search Module for a Bookstore App

Objectives

- Understand UI patterns for search functionality.
- Design a user-friendly search experience.
- Simulate filters, suggestions, and results using Figma.

Topics Learnt

- Search bar design and placeholder UX
- Filters and sorting interaction
- Displaying real-time search results
- Designing for empty and error states

Steps

1. **Design the Search UI**
 - Add a search bar with icon and placeholder text.
 - Design a result list layout (e.g., book image + title + author).
2. **Add Filter Options**
 - Include dropdowns or chips for genre, price range, etc.
 - Simulate filter interaction using overlays.
3. **Design Result and Empty State Screens**
 - Create screens for search success and “No Results Found”.
4. **Prototype the Flow**
 - Link search bar to result screens with "After Delay" or "On Click".

Expected Output

An interactive search module that:

- Accepts user input via search bar
- Returns simulated results or error messages
- Demonstrates use of filters and real-time interaction

Program 9: Study and Analysis of Navigation Design and Its Implementation

Problem statement: Designing Bottom Navigation for a Food Delivery App

Objectives

- Analyze common navigation patterns (top, bottom, side).
- Implement bottom navigation for a mobile application.
- Ensure clarity, accessibility, and visual consistency.

Topics Learnt

- Navigation hierarchy and placement
- Iconography and labels for clarity
- Active state management
- Prototyping multi-page navigation

Steps

1. **Design 4–5 Main Screens** (e.g., Home, Search, Orders, Profile)
2. **Create Bottom Navigation Bar**
 - Add icons + labels for each section.
 - Highlight the active item.
3. **Link Navigation in Prototype Mode**
 - Use On Tap interactions to navigate between screens.
4. **Use Variants for Active States**
 - Create different states (active/inactive) for nav buttons.

Expected Output

An interactive multi-screen prototype with:

- Fully functional bottom navigation
- Active state highlighting
- Clear structure and seamless transitions

iPhone 16 - 1

iPhone 16 - 2

iPhone 16 - 3

iPhone 16 - 4

Program 10: Creating Social Media Advertisement Using Online Tools

Problem statement: Designing a Social Media Ad Banner Using Canva

Objectives

- Understand design principles for social media ads.
- Use online tools like Canva or Adobe Express to create banners.
- Learn about aspect ratios, CTA buttons, and visual hierarchy.

Topics Learnt

- Basics of advertisement layout
- Typography and color for attention
- Placement of logos, images, and call-to-actions
- Export formats suitable for social platforms

Steps

1. **Choose a Template in Canva**
 - Select an Instagram or Facebook ad format (e.g., 1080x1080 px).
2. **Customize Text and Imagery**
 - Add a headline, offer, product image, and brand logo.
 - Use color contrast to highlight CTA.
3. **Refine and Download**
 - Check alignment and consistency.
 - Export as PNG/JPG and test on social media preview tools.

Expected Output

A professionally designed ad banner:

- Optimized for one platform (e.g., Instagram)
- Includes a clear message and CTA
- Visually aligned with branding guidelines
